

"Printing Life to Shape the Future"

OVERVIEW

"Printing Life to Shape the Future"

INNOREGEN, INC.

- InnoRegen, Inc. (since April 25, 2018)
- CEO : Jang Soo Suh, MD, PhD, Professor of Kyungpook National University, Korea
- Co-CEO : Young K. Yoon, MD, PhD, Physiatrist (Physical Medicine and Rehabilitation)
- Location: 1501, 33 Cheombokro, Donggu, Daegu, 41069 Republic of Korea
- Main business model: Bioinks for 3D bioprinting & additive manufacturing and bioink-based medical devices
- November 2018, Selected as a TIPS (TECH INCUBATOR PROGRAM FOR START UP) project
- July 2019, Selected as a 'Regulatory Sandbox' project
- Patent (2), Patent Application (15), PCT (2)

SCIENTIFIC ADVISORY BOARD

- James J. Yoo, MD, PhD, Professor, Wake Forest School of Medicine, USA
- Sang Jin Lee, PhD, Professor, Wake Forest School of Medicine, USA
- Moon Suk Kim, PhD, Professor, Ajou University, Korea
- Grace Lim, PhD, Professor, Kyungpook National University, Korea
- Tae G. Kwon, MD, PhD, Professor, Kyungpook National University, Korea
- Hoon Je Cho, PhD, CEO of ActnerLAB, Korea

COMPANY MISSION

- InnoRegen, Inc. is committed to develop and provide standardized bioinks that are optimally formulated for bioprinting of cells, tissues, and organs.
- Our mission is to contribute to the advancement of bioprinting/biofabrication field that will change the way medicine is practiced.

BIOINK

What is "BIOINK"?

Biomaterials for making artificial organs that can be realized by 3D printer.

Utilization of Functional BIOINK

BACKGROUND STATEMENT

- 3D bioprinting technology has gained much attention recently due to its potential for revolutionizing medical practices in the field of medicine/healthcare.
- Recent research advances have enabled bioprinting of cells, biocompatible materials, and supporting components into complex 3D functional living tissues.
- This developing field promises to address the dire need for tissues and organs suitable for transplantation.

3D bioprinting market scale (North America)

by technology, 2012-2022 (USD Million)

PRODUCTS

Gel4Cell®

With IMPROVED Gel4Cell® Bioink, You Can Now Print with Even More Confidence!

- The Innoregen's Gel4Cell® formulation has been tested to generate multiple layered 3D tissue constructs that maintain structural integrity over a long-term in vitro. Although Gel4Cell® bioink is specifically formulated for bioprinting applications, it can be used for other research studies that require 3D culture environment.
- Solution type (1 kit, 10 mL)

Bioprinting of Organized C2C12 Myoblasts

Gel4Cell®

Normalized length of bioprinted construct

Gel4Tissue®

Gel4Tissue Peptide Bioinks for Tissue-specific Regeneration!

- Gel4Tissue bioink formulations derived from pig small intestinal submucosa (SIS) can support the cell proliferation and accelerate the tissue maturation/formation for various tissue engineering applications.
- Gel4Tissue bioink contains various types of collagen, lycosaminoglycans (GAGs), hyaluronic acid, heparan sulfate, chondroitin sulfate, and growth factors such as FGF - 2 and TGF - β .

PRODUCTS

Gel4Cell® - BMP (Peptides)

Gel4Cell® - Peptide Bioinks for Tissue-specific Regeneration!

- Gel4Cell® - BMP is BMP-2 mimetic peptide conjugated to Gel4Cell® bioink and cell compatible & osteoinductive bioink for bone tissue engineering applications.

Printed construct containing human bone marrow - derived stem cells (hMSCs)

Gel4Cell® - TGF (Peptides)

- Gel4Cell® - TGF is TGF mimetic peptide conjugated to Gel4Cell® bioink and cell compatible & chondrogenic bioink for cartilage tissue engineering applications.

Printed construct containing human bone marrow - derived stem cells (hMSCs)

PRODUCTS

Gel4Cell® - VEGF (Peptides)

- Gel4Cell® - VEGF is VEGF mimetic peptide conjugated to Gel4Cell® bioink and cell compatible & angiogenic bioink for accelerating vascularization.

Effect of wound healing with Yucatan Pigs

PolyInks® - PCL, PLA

PCL	PLA
ε - caprolactone	L - lactide
Printing temp. : 65 - 100°C	Printing temp. : 200 - 250°C
Excellent biodegradability	
Powder	

PolyInks® - PLCL - W, M, Y

Biodegradable polymer

- PolyInks® - PLCL W (2 - 6 weeks)
- PolyInks® - PLCL M (6 - 10 weeks)
- PolyInks® - PLCL Y (10 - 16 weeks)

PRODUCTS

PRODUCTS under Development

Gel4Cell®- TCP (Tricalcium phosphate)

Gel4Cell®- VEGF Skin Patch

- **Gel4Cell®- TCP**

Gel4Cell®- TCP can be used for bone regeneration and bone graft.

- **Gel4Cell®- VEGF Skin Patch**

Gel4Cell®-VEGF Skin Patch containing VEGF peptide that helps angiogenesis and has an excellent effect on wound healing.

- **Fibrin Gel**

Fibrin Gel with excellent biocompatibility without photo-gelation.

- **Xeno-free Gel**

Xeno-free bioink using human-derived materials

- **Gel Dressing**

Gel wound dressing helps to regenerate tissues by creating wet environment.

Product Name	Catalog #	Type	Specific Features
Gel4Cell® (kit), 10 mL	IR - 101	S	Basic formulation
Gel4Cell® - BMP (kit), 10 mL	IR - 102	S	Osteoinductive material
Gel4Cell® - VEGF (kit), 10 mL	IR - 103	S	Angiogenic material
Gel4Cell® - TGF (kit), 10 mL	IR - 104	S	Chondrogenic material
Gel4Tissue® (kit), 10 mL	IR - 105	S	
Col4Cell(kit), 10 mL	IR - 106	S	
PolyInks® - PCL, 50 g	IR - 201	P	> 2 years
PolyInks® - PLA, 5 g	IR - 202	P	> 2 years
PolyInks® - PLCL - W, 1 g	IR - 203	P	2 – 6 weeks
PolyInks® - PLCL - M, 1 g	IR - 204	P	6 – 10 weeks
PolyInks® - PLCL - Y, 1 g	IR - 205	P	10 – 16 weeks
Gel-linker (365 nm), 2 mL	IR - 301	S	
Gel-linker (405 nm), 2 mL	IR - 302	S	

S : Solution, P : Powder

PRODUCTS

Hydrogel - based BIOINKs for cell-based 3D bioprinting

IR - 101
Gel4Cell®

IR - 102
Gel4Cell® - BMP

IR - 103
Gel4Cell® - VEGF

IR - 104
Gel4Cell® - TGF

IR - 105
Gell4Tissue®

IR - 106
Col4Cell

Polymeric BIOINKs for structure-based 3D bioprinting

IR - 201
PolyInks®-PCL powder

IR - 202
PolyInks®-PLA powder

IR - 203
PolyInks®PLCL - W powder

IR - 204
PolyInks®PLCL - M powder

IR - 205
PolyInks®PLCL - Y powder
